AMENDMENTS TO THE CLAIMS

1. (Currently Amended) An authentication token which is normally held by a user and, when the user is to use a use-device for executing predetermined processing in accordance with authentication data of the user, connected to the use-device to perform user authentication on the basis of biometrical information of the user, characterized by comprising:

a personal collation unit (15, 111) including a sensor (11) for detecting the biometrical information of the user and outputting a detection result as sensing data, a storage unit (12) which stores in advance registered data to be collated with the biometrical information of the user, and a collation unit (13) for collating the registered data stored in said storage unit (12) with the sensing data from said sensor (11) and outputting a collation result as authentication data representing a user authentication result; and

a communication unit (14, 113) for transmitting the authentication data from said personal collation unit (15, 111) to the use device as communication data, and

a protocol conversion unit for converting data format of the communication data from said communication unit into a predetermined data format and transmitting the communication data to the device,

wherein said personal collation unit and communication unit are integrated.

2. (Currently Amended) A-The token according to claim 1, wherein said storage unit (12)-further stores in advance user information unique to the user, which is to be used for processing in the use-device, and

said collation unit (13)-outputs the authentication data containing the user information read out from said storage unit-(12).

3. (Canceled)

1,1

4. (Currently Amended) A-The token according to claim 1, further comprising a radio unit (42) for transmitting the communication data from said communication unit (14, 113) to the use device through a radio section.
